

EE446 Lab 7
Phina Penteriani

Baseline model:

0	1	2	3	4
Found 3 (-7)	Found 1 (-19)	Found 2 (126)	Found 0 (62)	d 4 (87)
5	6	7	8	9
Found 1 (119)	Found 6 (103)	Found 7 (65)	ound 8 (127)	Found 9 (127)

Finetuned model:

0	1	2	3	4
---	---	---	---	---

[illegible]

Discussion:

Although neither model was fully accurate, I noticed the finetuned one had a more consistent pattern. Even though it was still wrong, it was able to assign more numbers correctly than the baseline one

Although neither model was correct, we had difficulty collecting data using the website. Many of our numbers were very rough drawings, and we only figured out how to draw numbers better after collecting our data. This explains why our screenshots look good, but our data is not accurate.

I do believe finetuning did help, but ultimately I believe if we had found a better method to collect numbers, it would have helped much more and shown a bigger difference in accuracy. The tables above show how it was able to pick up on our movements more accurately, though we struggled most with identifying 3 and 0.
